Emergency Eyewash Stations that you can count on

Wall-mountable eye flush stations with 16 or 32 ounce bottles. Easy to read emergency instructions printed on the wallboard. Plastic squeeze bottles to direct a fluid stream of sterile solution to the affected areas. The PhysiciansCare family of eye wash stations comply with OSHA regulation 29 CFR 1910.151. They are not meant to replace the primary 15 minute eyewash equipment needed to comply with ANSI/ISEA Z308.1-2015 but complement them instead. These secondary eyewash stations provide easy access for a quick

response to eye accidents. OSHA requires eye flush be available within a 10 second walk from chemicals and other injurious materials, along with work situations that have airborne particles such as allergens, dust, sawdust or smoke. The smaller size of these stations makes them ideal for placement closer to hazardous areas for immediate response. The removable bottles are also perfect for portable use when transporting an injured worker to a facility for further medical care.
